TURNOS & ACTIVAWEB

Clock-in application

TURNOS & ACTIVAWEB is a powerful tool for the clock in control for employees at any organization.

It is highly configurable, so it can perform the clock-in configuration for any company.

Among its variety of functionalities, the most important ones are the shifts configuration, kind of permissions and special time events which are collected daily. Besides, it allows to manage the shifts time tables and to sort it by group of employees.

TURNOS & AW has all the functionalities from a classic clock in control, but it adds the adaptability to any of the particular circumstances of the company.

This module is able to be integrated with SIP for the access control, the identification of the employees and the areas definition. Besides, it is compatible with a geographic distribution of the working centers.

TURNOS & AW – Clock-in application
