SIP

People Identification System

SIP is placed as a new and powerful tool in the identification and security fields. This features are completely necessary for the newest access control, identification, presence and security systems.

SIP is nowadays the more powerful and suitable system for managing IP cameras, RFID sensors, access control devices and iris recognition sensors.

SIP is a higly scalable platform both with the different sensor to be integrated and the wide range of areas configuration to be controlled

The centralized monitoring control point allows SIP to be a powerful tool for the security and control management with very important added values over the traditional solutions, such us:

- Easy and efficient implementation.
- Confidential information.
- Real-time monitoring tools.
- Events, alerts and alarms management.

Parque Científico y Tec. Cartuja 93, C/Max Planck nº3, Edificio SHS Iris I y II, 41092 Sevilla. España.

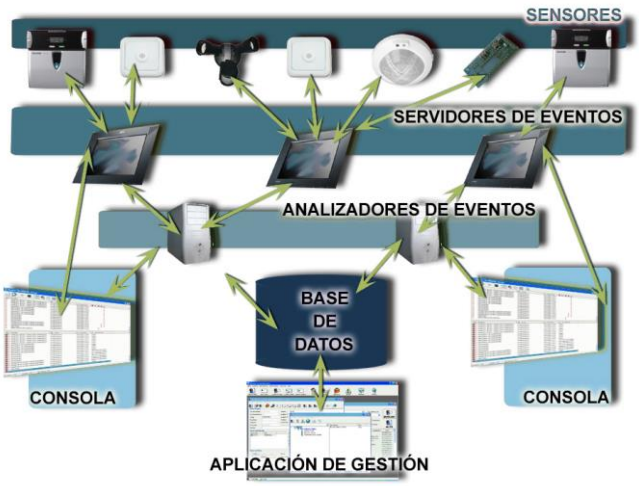
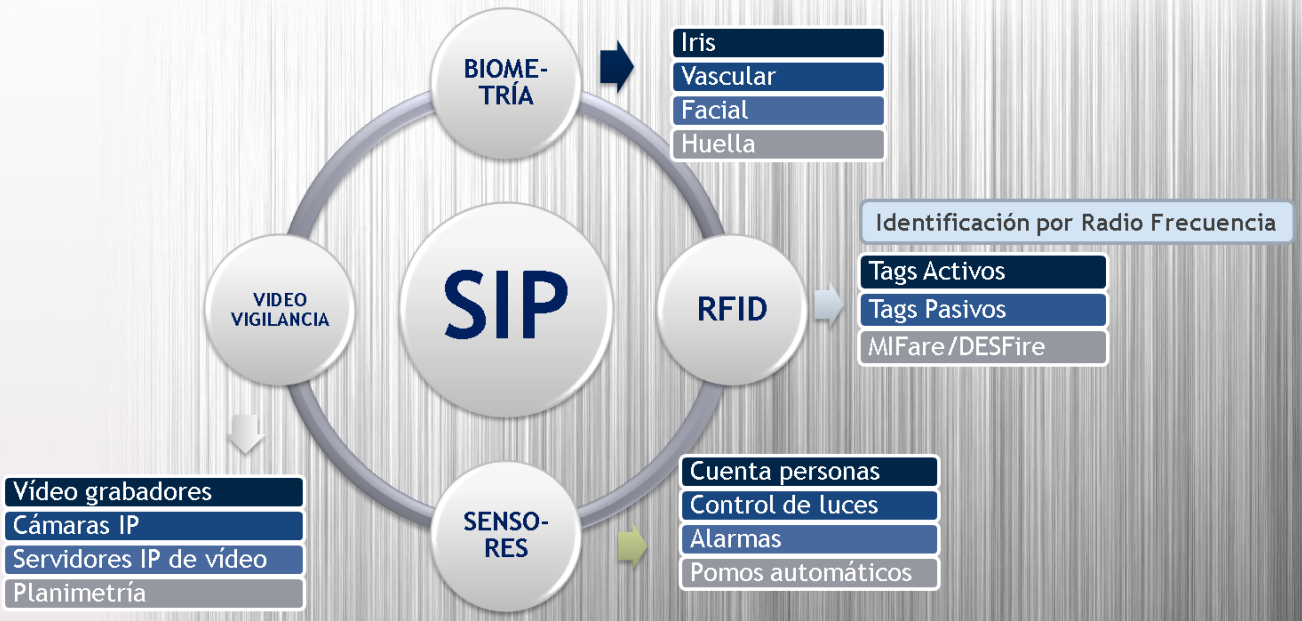
SIP – People Identification System

CARACTERÍSTICAS PRINCIPALES

- Users management
- Visual following and planimetry.
- Multi-company area management.
- Profiles and access permission management.
- Historical access record.
- Visitant management.
- Real-time event visualization and alarm management.
- Alert and actions configuration.
- Client Data Base integration.





SYSTEM SCALABILITY
